

ROUTEcaptain™ is a web based tool, designed to assign routes based on business rules. The routes are dynamically generated and optimized based on criteria sent to the system for each booking.

BUSINESS MANAGEMENT

➤ **ROUTEcaptain™** allows greater control with a common interface between all systems retrieving routes. This eliminates differences in routes returned to different systems. Core functionality includes - cutoff, departure, arrival and availability times, mileage, modal delay ability, dry docking logic, hours of operation/holiday schedule for each facility, and the ability to warn the users or lock a vessel per VVD, service, or equipment availability.

ALIGNMENT

➤ **ROUTEcaptain™** manages your business with greater alignment with Sales, Service Management, Operations, Logistics, Trade-lane and Inland groups. Ideal for Shippers, 3PLs, NVOCCs and truckers who have a need to centralize their routing capabilities for ease of maintainability and consistency.

REDUCE COST

➤ Greater data accuracy ** routing that is given at time of booking is actually how the cargo moves ** greater ease of adding, updating, and expiring routes ** central location for all route specific information ** no need to go to multiple systems to research routes** \$\$ Cost Savings \$\$ **

Technical Specifications

- Internet Access, IE 5.0 or higher
